

Trailblazer Transporter | Motorized Carr...

Overview

A Motorized Carrier for Those Difficult to Reach Areas

The LS360 Trailblazer Transporter, a motorized carrier by Orec, features a dual track drive and a durable metal bed that can take loads of up to 650 pounds anywhere you need to go. The independent wheels can cover steep slopes and obstacles with no problem—they can even handle steps! Whether you are a contractor needing to move materials, a land maintenance professional looking to clear a trail or you just need to haul material around your property, the Trailblazer will help you get the job done with little effort and maximum safety.

Haul Smarter with a Motorized Carrier

A common problem landscapers, trail builders and large property owners face when needing to haul heavy materials, is that they don't have the right outdoor power equipment for the right job. Perhaps their equipment is far too large to transport materials through tight spaces and maneuver up and around obstacles from uneven ground and rough terrain to challenges such as steep slopes and stairways. This motorized carrier is not only versatile with its adjustable walls to accommodate a variety of loads, but the Trailblazer Transporter makes professionals look smarter by helping them haul smarter!
