Wheeled Cyclone Flail Mower | Walk Behin...

Overview

A Walk Behind Brush Mower That Mulches

The AHR662 Cyclone Wheel Flail Mower by Orec is a walk behind brush mower that clears brush and mulches it for you! Our wheeled Cyclone offers the same cutting width and reliable engine as the track model. This wheeled version comes with the same awesome flail blade cutting system as the track model, but is actually lighter even with its wide agricultural tires! This walk behind brush mower and its impressive thirty-eight flail blades will take down tall grass, high weeds, brambles, and even small saplings. The Cyclone Wheel Flail Mower will chew up and mulch down the brush, so you don't have to! This all-in-one brush mower and mulching machine is easy to use, provides a simple clutch turning system, has easy blade height adjustment, and is lower in price.

What Will This Walk Behind Brush Mower Bring to Your Team?

Toughness – If the blades hit rocks or stumps, the flails pivot and release shock which protects the spindle from damage.

Superior Cutting – Rotary mowers cut only the bottom of the high weeds and often leave them standing. The Cyclone's flail blades rotate in an "up-cut" motion, thereby catching the whole plant at once. The Cyclone also mulches material down while cutting.

Safety – Unlike rotary mowers, which can throw objects in all directions, the Cyclone's steel flap guards help keep dangerous objects inside the deck.
